Saanvi — AI Voice Agent

Answers and makes calls in the caller's own language, 24/7

THE CLIENT'S PAIN Inbound lead calls, enquiries and follow-ups flood the front desk; callers expect their own language; and after-hours calls simply go unanswered — every missed call is a lost lead.

WHAT IT DOES

Speaks your languages

Understands and replies in multiple Indian languages, locked per call.

Qualifies leads live

Handles enquiries and pitches automatically, like a trained receptionist.

Real-time voice pipeline

Twilio + Sarvam STT/TTS + GPT run a continuous low-latency loop.

Captured per lead

Stores transcript, score, next action and call duration into the CRM.

WhatsApp handoff

After the call, outcomes and next steps continue on WhatsApp.

Never misses a call

Day, night, weekend or holiday — every enquiry gets picked up.

Saanvi — Languages & Setup

One agent, 20+ Indian languages, live in days

One Agent. 20+ Languages.

Saanvi detects the customer’s language and locks to it — speaking naturally in native script, the way a local person really talks.

Hindi

Kannada

How We Set It Up

A one-time setup gets Saanvi ready for your business.

1

Understand

We learn your business, services, and how you talk to customers.

2

Train Saanvi

We build her script, language, and voice around your requirements.

3

Connect

We link your phone number and go live — Saanvi starts taking calls.

4

Improve

We monitor calls and fine-tune her for better results.

Saanvi — Live Call Dashboard

One-click call trigger

Enter a lead and service, hit Call now — Saanvi dials and pitches.

Auto lead scoring

62 calls scored and split into Hot / Warm / Cold automatically.

Class + next action

Each lead gets a temperature and a suggested follow-up action.

Transcript + cost

Every call transcribed, with duration and exact per-minute cost.

Trigger a call, and every conversation is scored, classified and transcribed automatically.

WhatsApp Automation

Stateful chat automation — full multi-step tasks, not canned replies

THE CLIENT'S PAIN WhatsApp follow-ups were manual and inconsistent, customers expected instant answers, and simple auto-replies could never carry a customer through a real multi-step task like a booking or enquiry.

WHAT IT DOES

Conversation state machine

Walks each customer through a full multi-step journey, one step at a time.

Session persistence

Progress saved in MongoDB — the chat resumes exactly where it left off.

Nurture sequences

1,760+ industry-specific templates, status-driven with rotation.

Integrations

Google Maps geocoding, MSG91 and CRM data wired into the flow.

Admin oversight

A React Native admin app monitors chats and hands off to a human.

Proven across clients

Delivered for Sarathi Associates, LauncherDesk, AbhiCabs and more.

WhatsApp — All Channels, One Inbox

All channels, one inbox

WhatsApp, Email and SMS unified in a single view.

Bulk WhatsApp

Fire nurture and promos to whole segments in one click.

Ready-made templates

Service-specific message templates on tap.

Lead-linked chats

Every conversation tied back to its lead in the CRM.

WhatsApp, email and SMS in one place — with bulk sends and ready templates.

Marksheet Scanner

Point a phone at any document — get structured Excel back

THE CLIENT'S PAIN Entering data from marksheets, answer booklets, admission forms, fee receipts and ledgers was manual, slow and error-prone — with no way to define what to extract and no offline or cloud storage.

WHAT IT DOES

CameraX capture

Live guided framing — snap any marksheet, form, receipt or ledger.

Template / schema builder

Define exact fields once, or auto-detect them from a sample sheet.

Dual AI extraction

Gemini reads layout, OpenAI extracts values; Azure OCR as a third option.

Universal zero-config scan

Any labelled document — fields and values detected with no template.

Ledger scan + handwriting

Tabular ledgers structured; AI corrects handwritten values.

Excel export + wallet

One-tap XLSX export, per-user cloud storage, credits, white-label.

Marksheet Scanner — On Any Phone

Pick a saved template or scan any document — extract straight to Excel.

Reusable templates

Save a schema once — e.g. Answer_Booklet, 29 columns.

Universal & ledger scan

Zero-config scan for any form, register or ledger.

Bulk import + Excel

Batch-scan and export straight to Excel, with history.

Wallet credits

Scan credits and usage tracked per user; white-label.

AI Lead Intelligence

The AI layer that tells reps who's hot and what to do next

THE CLIENT'S PAIN

Reps sit on hundreds of leads with no idea who's actually hot or what to do next — so good leads go cold while the team works the wrong ones.

WHAT IT DOES

AI action summaries

A plain-language summary per lead, built from call history and meeting remarks.

Next best action

The single most useful next step, surfaced automatically for each lead.

Sentiment analysis

Reads the tone of interactions to flag interest and risk.

Hot / Warm / Cold

Suggests a temperature so reps prioritise the right leads first.

AI call summaries

Every logged call summarised — no manual note-taking.

Qualification scoring

Automatic score against rules — score, max, percentage and category.

Rocky — Digital Marketing Automation

Automates the whole marketing motion — not just paid ads, powered by SkyUp's AI stack

THE CLIENT'S PAIN Digital marketing is fragmented and manual — strategy, campaign building, targeting, content and optimization spread across tools and guesswork, so businesses overspend and can't scale marketing without a big team or agency retainer.

WHAT IT DOES

Grounded in real playbooks

Dual RAG retrieval from official Meta/Google docs plus marketing strategy.

Full-funnel campaign build

Drafts structure end-to-end across campaign, ad set and ad.

Precise targeting

Audience built by location and interest via the Meta Targeting Search API.

Across the whole motion

Strategy, creative direction and channels — paid ads are just one slice.

Self-improving

A results feedback loop shifts spend toward what actually converts.

Always current

A daily ingestion job keeps the ad-knowledge base fresh.

Rocky — The Agency Command Center

Unified command center

Meta Ads, Google Ads, SEO and social in a single live view.

Agency health score

An at-a-glance health read across every active client.

Leads & spend overview

Live leads pipeline and spend tracking, updated through the day.

“Ask Rocky anything”

A built-in AI copilot to analyze, create or take action — by voice or text.

One screen for every client, campaign and channel — with an AI you can simply ask.

Other AI & Automation Capabilities

Beyond Saanvi, WhatsApp and Marksheet Scanner — the broader AI stack behind every build

CAPABILITIES

AI Business Automation

GPT-4 powered automation that removes manual steps from any business process, end-to-end.

Workflow Automation

A visual, no-code builder for approvals, routing and multi-step processes across departments.

AI Chatbots

Multilingual GPT-4 chatbots that handle enquiries, qualify leads and book appointments 24/7.

AI OCR & Document AI

Extracts and validates data from invoices, contracts and forms with 99%+ accuracy — zero manual entry.

ERP Automation

Integrated finance, HR, inventory and procurement workflows on one connected platform.

Approval Workflow

Multi-level digital sign-off with escalation alerts, mobile approval and a full audit trail.

Other AI & Automation Capabilities

Intelligence layers that sit on top of every SkyUp automation

CAPABILITIES

Business Intelligence & Predictive Analytics

Real-time dashboards, KPI monitoring and AI forecasting for sales, inventory and churn.

Generative AI

Auto-generates proposals, product descriptions, emails and reports at multiples of human speed.

Recommendation Engine

Personalised product, content and workflow recommendations for every user.

Sentiment Analysis

Real-time monitoring of customer feedback, support tickets and social mentions.

Cloud Automation

Scalable cloud-native apps on AWS, Azure and GCP, built for 99.9% uptime.

API Integration

Connects any system — ERP, CRM, payment gateways — into one unified data flow.

Other AI & Automation Capabilities

Rounding out the stack — document, notification and process-wide automation

CAPABILITIES

Document Automation

End-to-end intelligent processing of invoices, quotations, purchase orders and contracts with AI extraction and auto-routing.

Smart Notification System

Omni-channel automated alerts across WhatsApp, Email, SMS and in-app, triggered by business events and AI-driven schedules.

Invoice Automation

Auto-generation, matching and payment scheduling that cuts invoice errors by up to 95%.

Business Process Automation

End-to-end elimination of manual workflows across every department, not just one system.

Our Automation Delivery Process

A structured, transparent methodology from discovery to go-live and beyond

10-STEP PROCESS

Average Implementation: 4–12 Weeks · Minimum Viable Automation in as little as 2 Weeks

Industries We Serve

Deep domain expertise across 11 industries — proven automation for your sector

INDUSTRIES

● Real Estate

Lead-to-deal automation, site visits, commission tracking

● Education

Student ERP, admissions, marksheet OCR

● Healthcare

Patient records, appointment booking, billing

● Finance

Loan origination, KYC, fraud detection
