

Software, AI & Digital Growth Partner

Custom software, AI automation and digital growth — every product built from scratch, delivered to production, and maintained by the same team.

Build

Automate

Grow

Optimize

How SkyUp Works

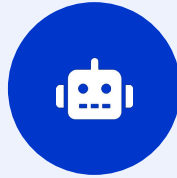

Three connected pillars, one operating model — Build → Automate → Grow → Optimize.

Software & Technology

Custom systems built around a client's exact workflow.

- CRM, ERP & business platforms
- Web, mobile & desktop apps
- UI/UX & product design

AI & Automation

AI that removes repetitive work and answers instantly.

- AI voice agents & chatbots
- WhatsApp & workflow automation
- Custom AI integrations

Digital Growth

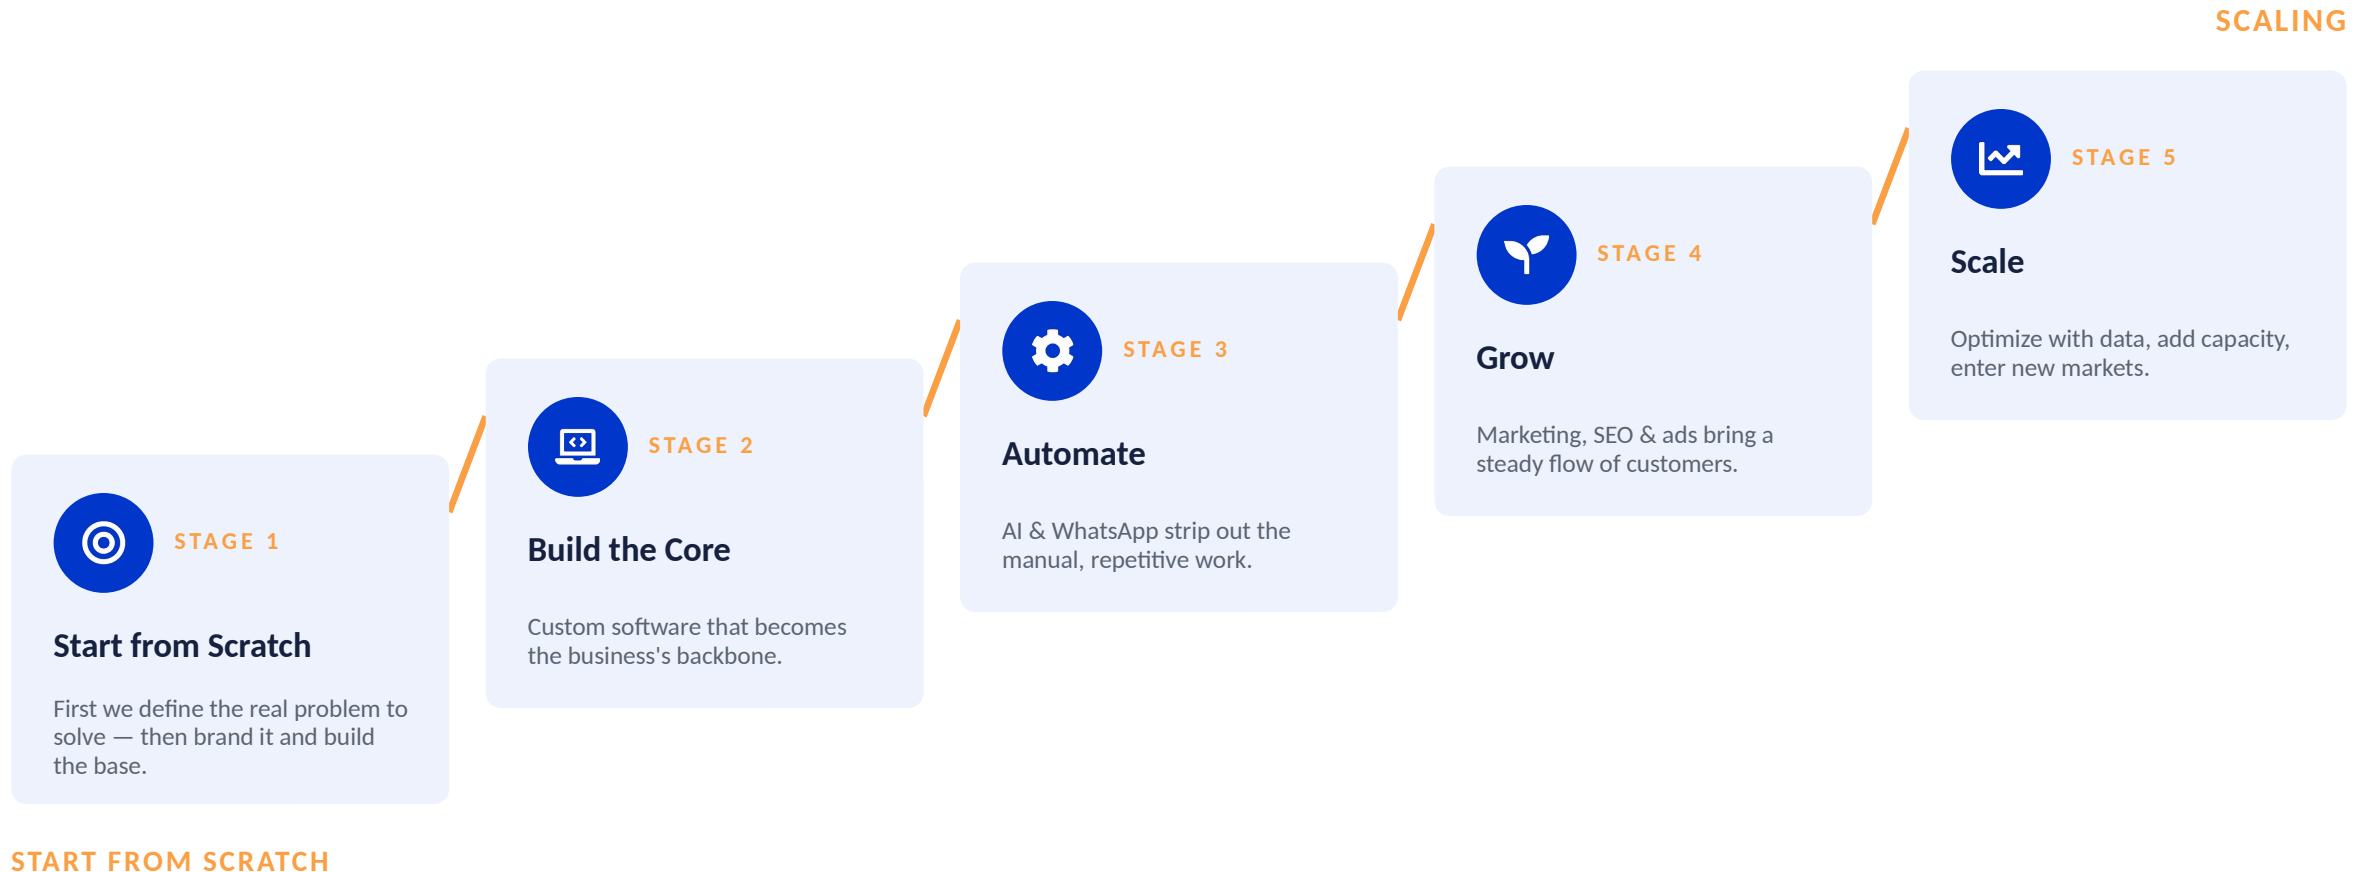

Getting found, getting leads, and converting them.

- Business strategy & branding
- Marketing automation & ads
- SEO & Google Business Profile
- eCommerce, social & analytics

Most clients start in one pillar — then we connect the other two around it.

Business Strategy — From Scratch to Scaling

We start by understanding the business — then guide the whole journey, from a day-one idea to scaling.

Branding — Built With Precision

Before a line of code, we define the brand — down to a modular logo grid measured in exact SVG units.

Every logo on a modular grid — 1X = 239.76 SVG units.

WHAT A SKYUP BRAND SYSTEM INCLUDES

- Brand strategy & archetypes
- Logo system — primary, secondary, mono, reverse, app icon
- Logo grid & clear-space rules
- Colour palette & usage
- Typography (Montserrat + SF Pro)
- Taglines, buzzwords & brand voice

Branding — Applied Across Every Touchpoint

The same identity, carried with the same precision — from a business card to a full vehicle wrap.

Vehicle livery — every view

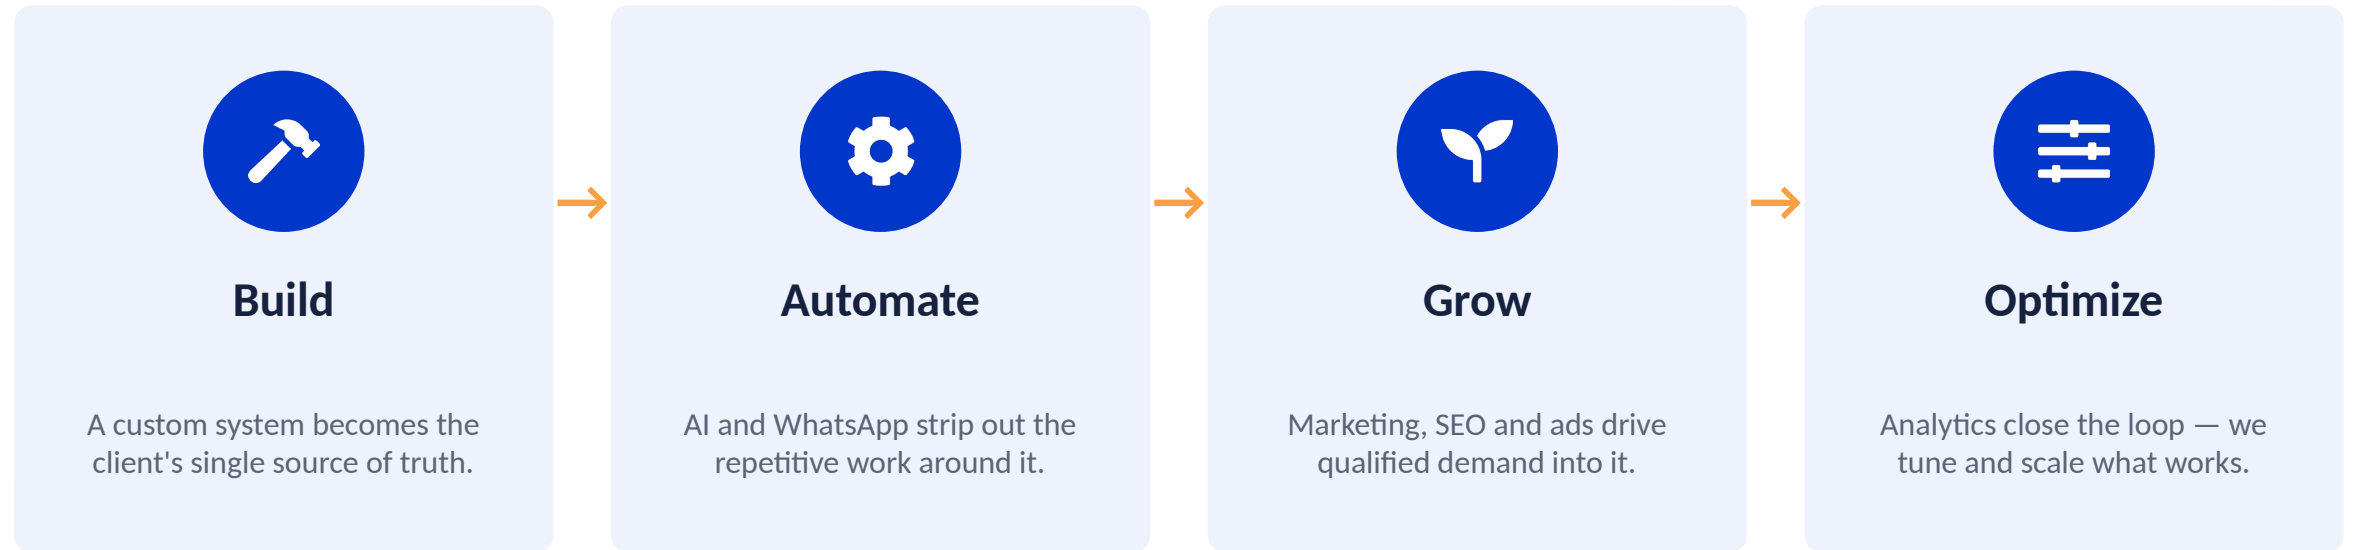

Business card

Apparel — front & back

Our Business Strategy

How every engagement grows — one repeatable operating model.

The land-and-expand play: most clients start in one pillar. Once the system proves itself, we connect the other two — turning SkyUp from a one-off vendor into the client's long-term technology & growth partner.

Packaged Growth Systems

Clients buy an outcome, not a list of services — each system bundles software, automation and growth.

Lead-to-Sale Growth System

CRM, automation and digital growth as one engine — structured customer acquisition from first click to closed deal.

Sales Automation System

Lead management and sales workflows that run themselves — follow-ups, nurture and reporting on autopilot.

eCommerce Growth System

Storefront technology plus growth — built to turn traffic into repeat orders.

Digital Business Launch System

A complete digital foundation — website, software, automation and growth — for a business starting from zero.

Software & Technology

The systems that replace spreadsheets, registers and disconnected tools.

SkyUp CRM • School ERP • Project Management • Transport ERP • Invoice System • Production Tracking • Home Healthcare

SkyUp CRM

Web + mobile — every lead, follow-up and deal in one place

THE CLIENT'S PAIN Sales teams tracked leads in spreadsheets — follow-ups slipped, no one could see where deals stood, and campaign leads from Meta, Google and LinkedIn arrived by hand with no performance data for management.

WHAT IT DOES

Lead pipeline

Source attribution, Hot/Warm/Cold scoring and full interaction history per lead.

WhatsApp nurture

1,760+ industry-specific automated sequences fired at each pipeline stage.

Multi-source ingestion

Meta, Google, LinkedIn and web-form leads flow in, auto-deduplicated.

AI lead intelligence

Next best action, key points, sentiment and suggested temperature per lead.

Call logging & transcription

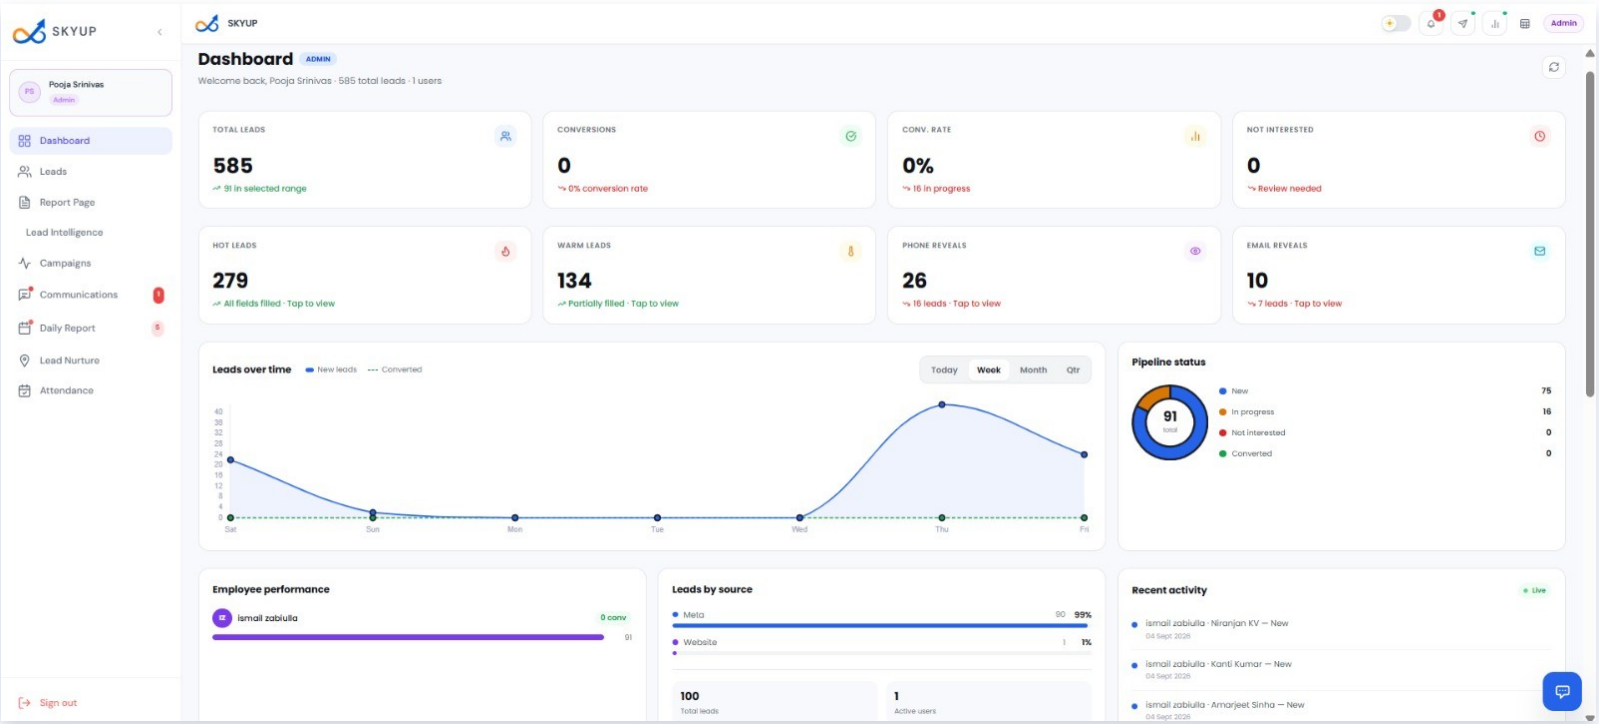

Outcomes, recordings and AI call summaries captured automatically.

Live dashboard & reports

Per-employee daily reports plus a custom report builder for management.

SkyUp CRM — Live Lead Dashboard

Live lead pipeline

585 leads auto-split into Hot, Warm and pipeline stages.

Multi-source leads

Meta, website and more — leads by source at a glance.

Conversion tracking

Conversions, phone/email reveals and daily trends together.

Team performance

Per-employee performance and a live recent-activity feed.

Every lead, source and conversion in one live view — 585 leads and counting.

School ERP

Every operational area of a school in one role-based system

THE CLIENT'S PAIN Students, teachers, timetables, exams, fees and attendance lived across disconnected registers, spreadsheets and paper — data gaps, delayed reporting, and no access control, so every staff member could see all data.

WHAT IT DOES

Students & teachers

Complete profiles, enrollment, academic history and class assignments.

Attendance

Digital class or individual attendance with instant date-range reports.

Exams & marks

Scheduling, per-subject result entry and auto-generated report cards.

Fee management

Fee structures, collection records and outstanding-balance tracking.

Timetable & homework

Class timetables, teacher coordination and digital assignments.

Role-based access + audit

Principal, admin, teacher, caretaker — each sees only their data.

Project Management Application

Web management + desktop tracker in one ecosystem

THE CLIENT'S PAIN Teams ran on spreadsheets and scattered chat — no single source of truth, constant manual follow-ups for status, poor workload visibility, and attendance disconnected from actual project work.

Role-based dashboards

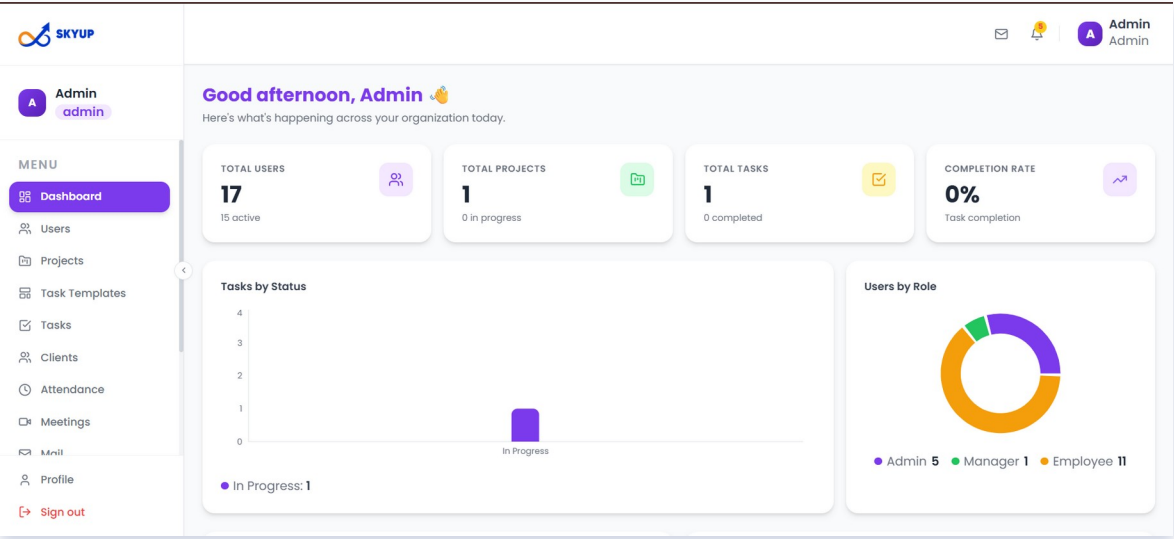

Task assignment & tracking

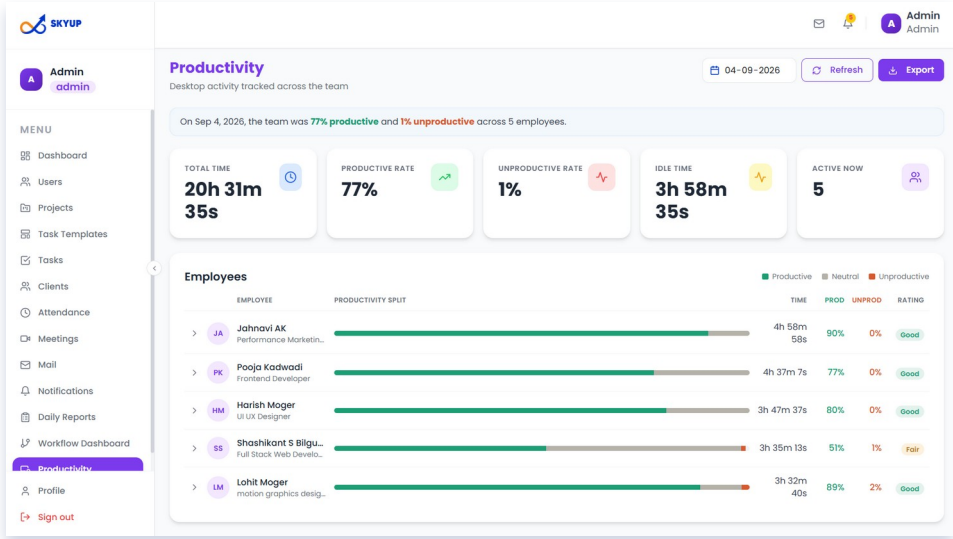

Daily reports & attendance

Tracker & productivity

Admin dashboard

Desktop-tracker productivity view

Real product UI. Tracker data is positioned as productivity support — with clear policies and access controls, not surveillance.

AbhiCabs Transport ERP

The full booking lifecycle — create to dispatch to close

THE CLIENT'S PAIN Bookings were juggled across calls and messages — no single place to see what was booked, confirmed or dispatched. Vehicles got double-assigned, drivers and operators had no shared view, and every status update went out by phone.

WHAT IT DOES

Booking management

Create, confirm, dispatch and close bookings from one dashboard with full status visibility.

Smart vehicle allocation

Checks availability and capacity before assigning — double-bookings blocked automatically.

Live status updates

Booking and vehicle changes appear in real time for coordinators, operators and drivers.

Background job processing

Notifications, transitions and reports run via BullMQ — the platform never slows down.

Scalable architecture

Load distributed across servers with caching for fast performance as volume grows.

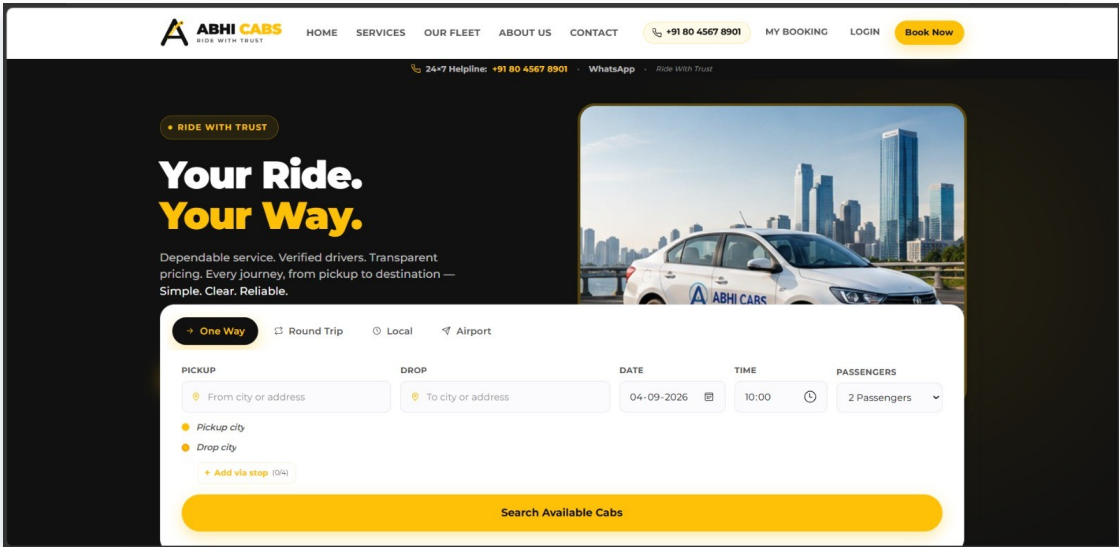

Role-based access + history

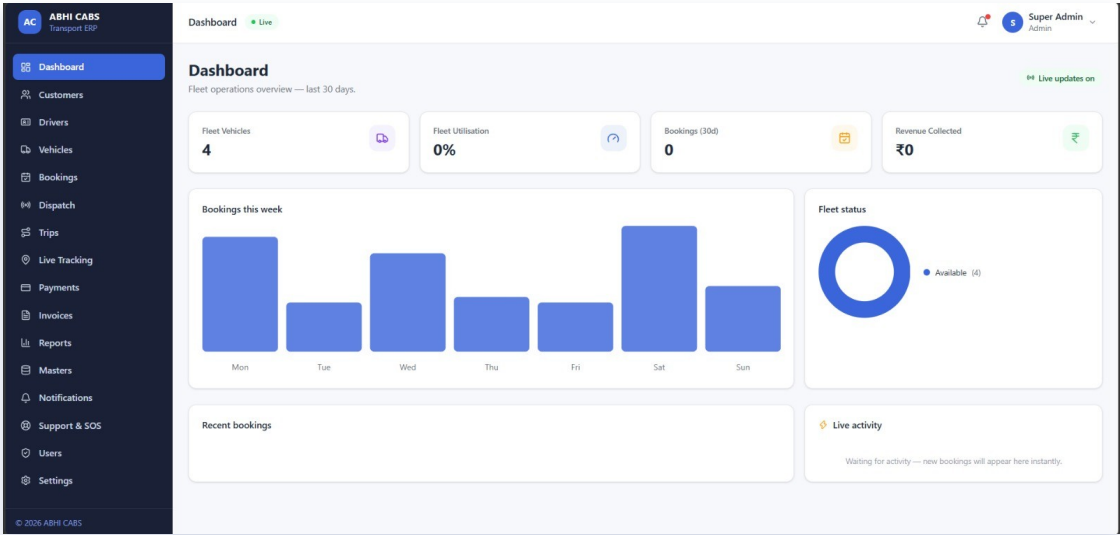

Tailored views per role, plus full booking history and logs for disputes or export.

AbhiCabs — Website + ERP

One system end-to-end — customers book on the site, operators run it on the ERP.

Customer booking website

Fleet & booking ERP (admin)

CRM × Invoice System

One connected flow from lead to order to payment

THE CLIENT'S PAIN Enquiries, sales orders, invoices, payments and delivery were spread across spreadsheets, WhatsApp and paper. Nothing linked a lead through to invoice and delivery, reporting was manual, and cheque follow-ups slipped.

WHAT IT DOES

Lead-to-buyer pipeline

Track every enquiry through Lead → Opportunity → Enquiry → Buyer with source and city.

Orders + auto lookup

Create orders with line items and terms; the mobile number auto-fills the customer's details.

Tax invoice generation

Convert any order to a numbered invoice with 5% VAT — PDF generated and stored automatically.

6-stage delivery tracker

Pending → Confirmed → Packed → Delay → Out → Delivered, each stage timestamped.

Cheque calendar + payments

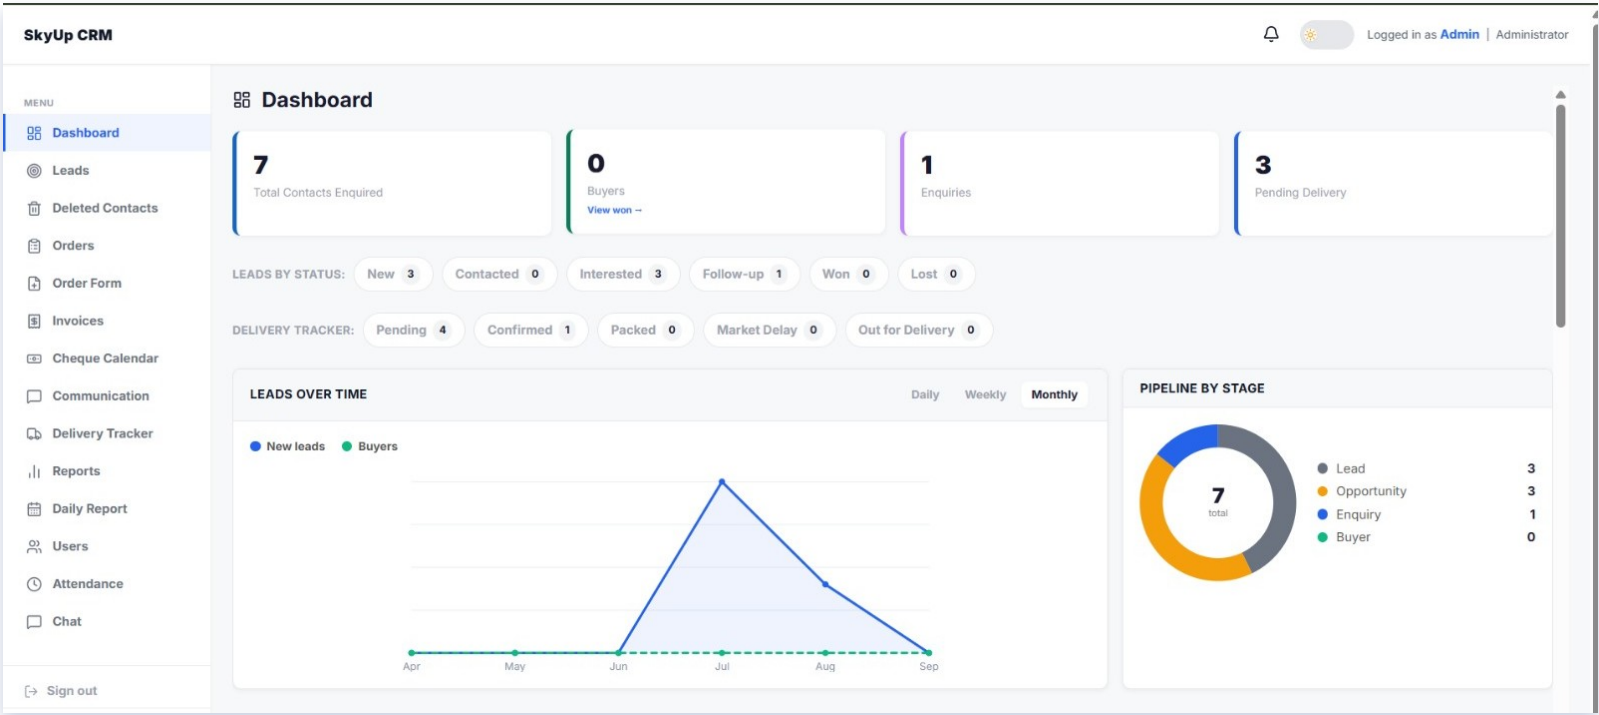

Receivable/payable cheques on a colour-coded calendar; Unpaid/Partial/Paid at a glance.

WhatsApp share & chat

One-tap share of orders and invoices, plus a full WhatsApp conversation interface.

CRM × Invoice — Live Dashboard

Lead-to-buyer pipeline

Contacts flow Lead → Opportunity → Enquiry → Buyer.

Delivery tracker

Pending → Confirmed → Packed → Out for Delivery, live.

Orders & invoices

Orders, tax invoices and a cheque calendar in one menu.

Pipeline by stage

See exactly where every deal sits, by count and value.

Lead to order to invoice to delivery — the whole flow on one board.

FMS Production Tracking

Role-based QC and production, milestone by milestone

THE CLIENT'S PAIN Production and QC ran on spreadsheets — plan dates, milestone status, inspection sign-offs and buyer updates all scattered, with nothing stopping a step being marked done before it was actually approved.

WHAT IT DOES

12-milestone model

Two tracks — Production (direct-complete) and QC (approval-gated) — across 12 stages.

Auto plan dates

Plan dates calculate automatically from PO and ship-date offsets.

Offline inspector PWA

Inspectors record QC and upload evidence to S3 even with no signal (IndexedDB outbox).

Merchandiser interlock

Only merchandiser approval writes the Actual date — enforced as a real DB transaction.

5-state colour tracking

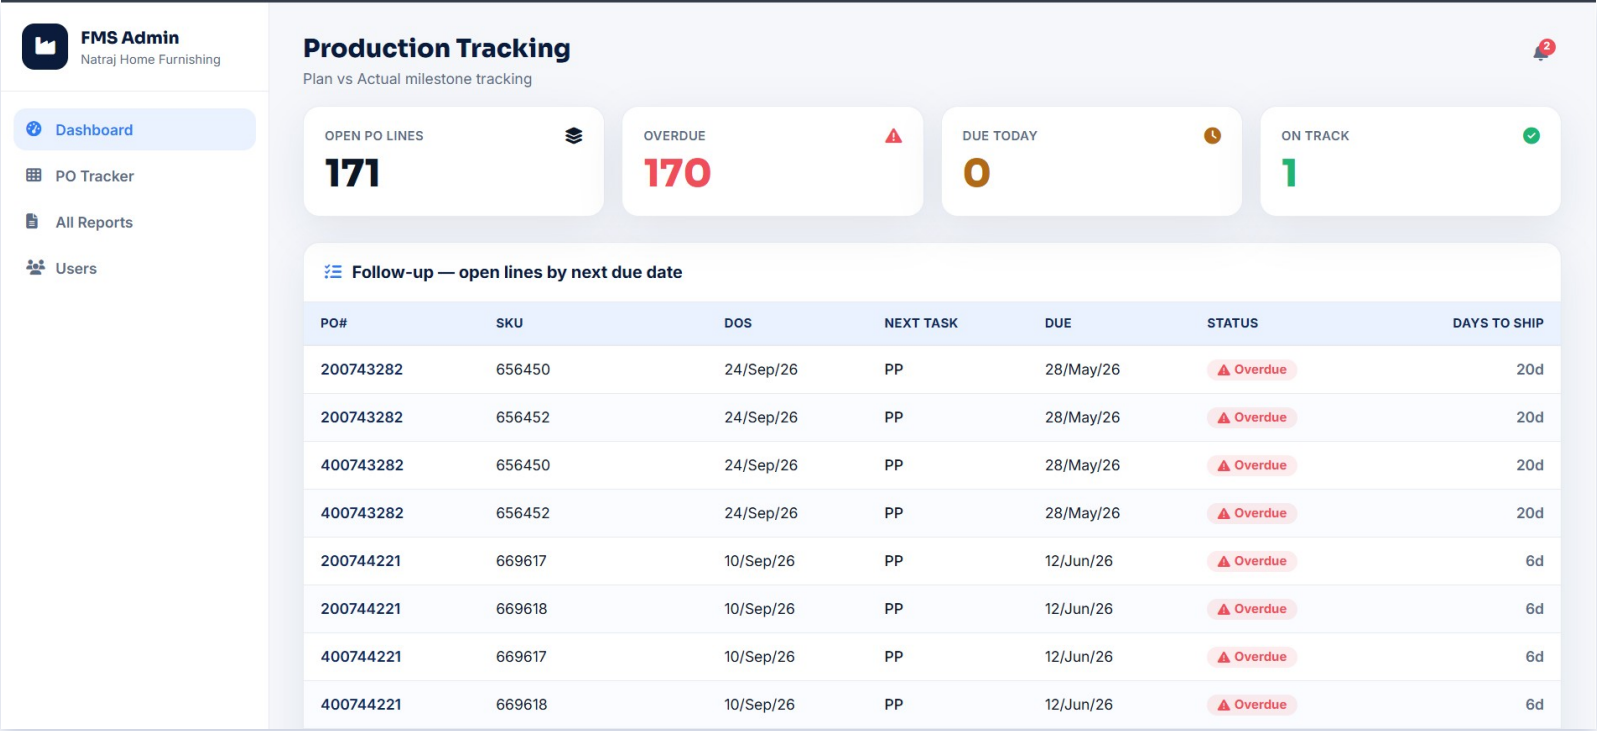

Every cell moves through five colour states, so status reads at a glance for all roles.

Buyer link + alerts

A public buyer status link shows live progress; a built-in alert engine notifies stakeholders.

FMS — Live Production Tracking

Open PO lines at a glance

171 open lines, with overdue, due-today and on-track counters up top.

Follow-up by due date

Every line sorted by its next due date so nothing quietly slips.

Next task + days to ship

Each PO shows its next milestone and exactly how many days remain.

Live status flags

Lines flag Overdue in red the moment they cross the due date.

Plan-vs-actual milestone tracking for Natraj Home Furnishing — every open PO line in one screen.

Sadagiri Home Healthcare

A branded platform for carers, patients and families

THE CLIENT'S PAIN The organisation had no digital platform to present its services or coordinate care. Carers couldn't check in, log tasks or record notes; families couldn't see care plans or message staff; and the old interface carried another provider's branding.

WHAT IT DOES

Service showcase

A branded, patient-facing view presenting every home-healthcare service clearly.

Carer task checklist

A structured task list per visit — tick off in real time, next task always highlighted.

GPS check-in / out

Carers confirm arrival and departure by location — a digital record per visit.

Voice note recording

Record clinical observations and handover notes during each visit.

SOS emergency button

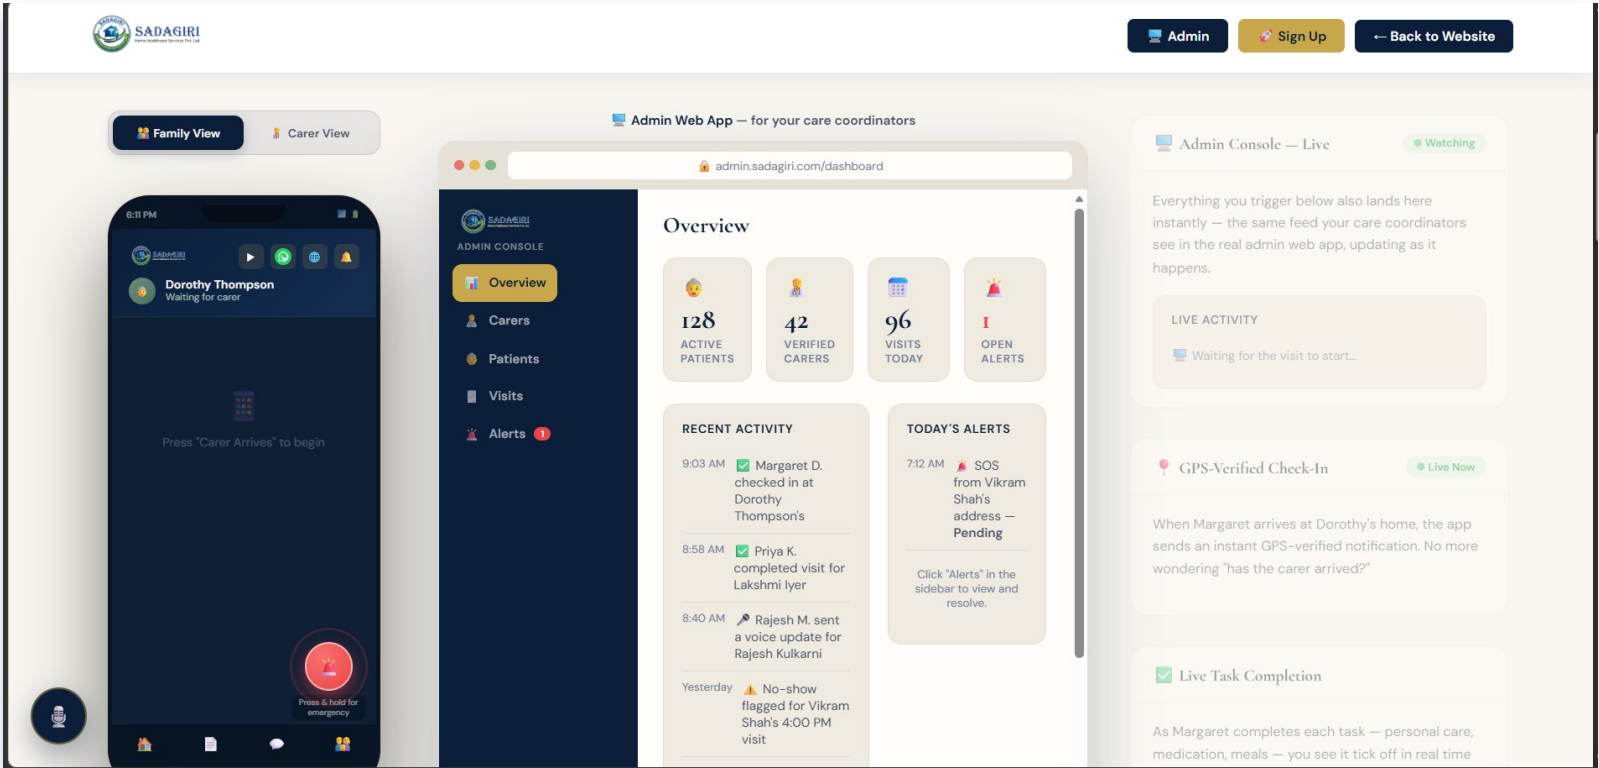

A hold-to-trigger SOS alert available throughout the carer interface.

Multilingual + WhatsApp

Regional language selector, in-app WhatsApp messaging and a live status feed.

Sadagiri — Family & Carer Platform

Admin console

Active patients, verified carers, visits today and open alerts at a glance.

GPS-verified check-in

The family gets an instant notification the moment a carer arrives.

Live task completion

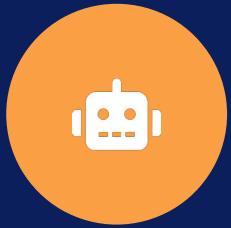

Personal care, medication and meals tick off in real time.

SOS + voice updates

Hold-to-trigger SOS and carer voice notes surface instantly to admin and family.

One live feed connecting the carer in the field, the admin console and the family — as it happens.

AI & Automation

AI that answers instantly, qualifies leads and removes repetitive work.

Saanvi Voice Agent • WhatsApp Automation • Marksheet Scanner • AI Lead Intelligence

02

Saanvi — AI Voice Agent

Answers and makes calls in the caller's own language, 24/7

THE CLIENT'S PAIN Inbound lead calls, enquiries and follow-ups flood the front desk; callers expect their own language; and after-hours calls simply go unanswered — every missed call is a lost lead.

WHAT IT DOES

Speaks your languages

Understands and replies in multiple Indian languages, locked per call.

Qualifies leads live

Handles enquiries and pitches automatically, like a trained receptionist.

Real-time voice pipeline

Twilio + Sarvam STT/TTS + GPT run a continuous low-latency loop.

Captured per lead

Stores transcript, score, next action and call duration into the CRM.

WhatsApp handoff

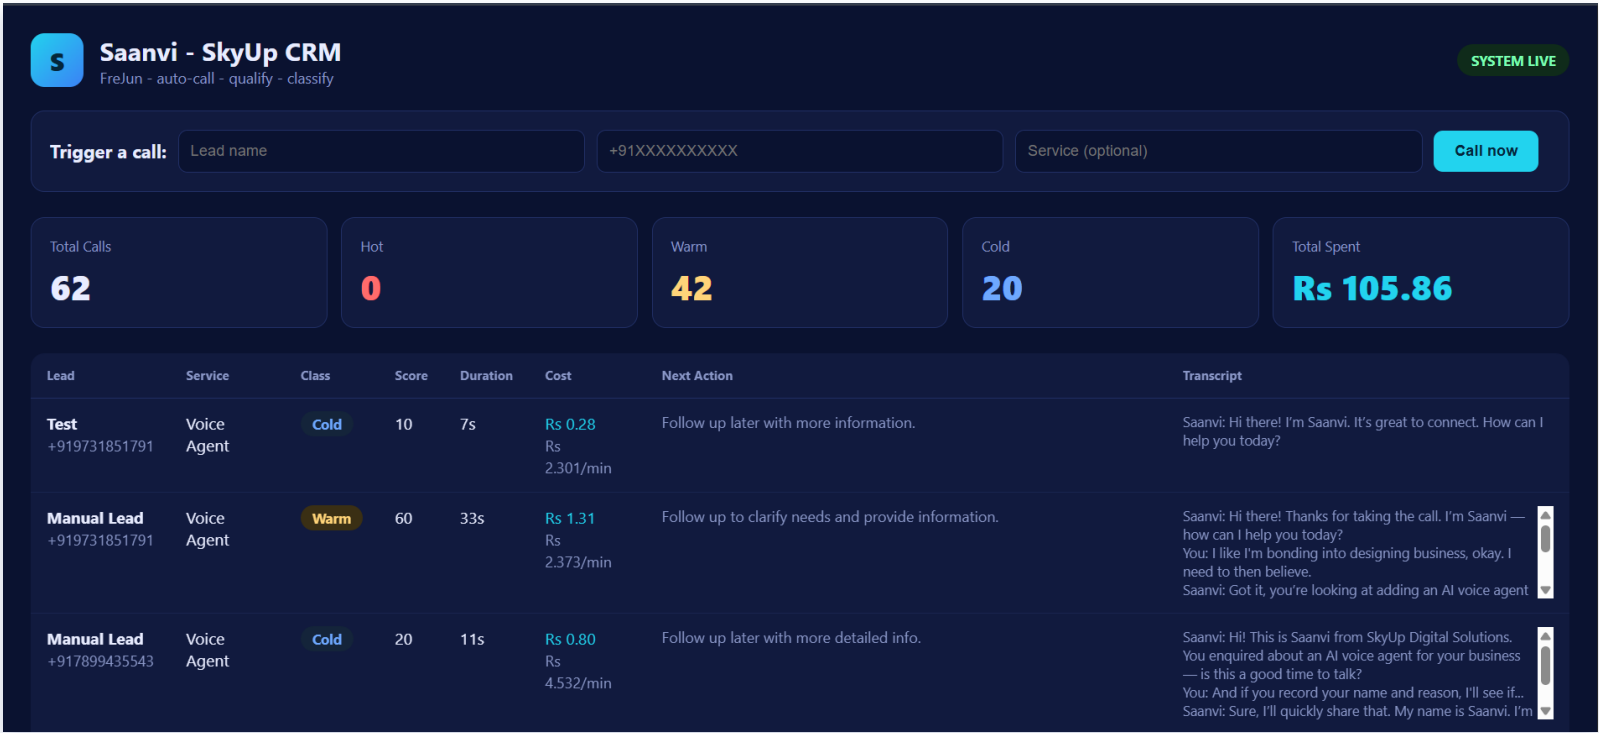

After the call, outcomes and next steps continue on WhatsApp.

Never misses a call

Day, night, weekend or holiday — every enquiry gets picked up.

Saanvi — Live Call Dashboard

One-click call trigger

Enter a lead and service, hit Call now — Saanvi dials and pitches.

Auto lead scoring

62 calls scored and split into Hot / Warm / Cold automatically.

Class + next action

Each lead gets a temperature and a suggested follow-up action.

Transcript + cost

Every call transcribed, with duration and exact per-minute cost.

Trigger a call, and every conversation is scored, classified and transcribed automatically.

WhatsApp Automation

Stateful chat automation — full multi-step tasks, not canned replies

THE CLIENT'S PAIN WhatsApp follow-ups were manual and inconsistent, customers expected instant answers, and simple auto-replies could never carry a customer through a real multi-step task like a booking or enquiry.

WHAT IT DOES

Conversation state machine

Walks each customer through a full multi-step journey, one step at a time.

Session persistence

Progress saved in MongoDB — the chat resumes exactly where it left off.

Nurture sequences

1,760+ industry-specific templates, status-driven with rotation.

Integrations

Google Maps geocoding, MSG91 and CRM data wired into the flow.

Admin oversight

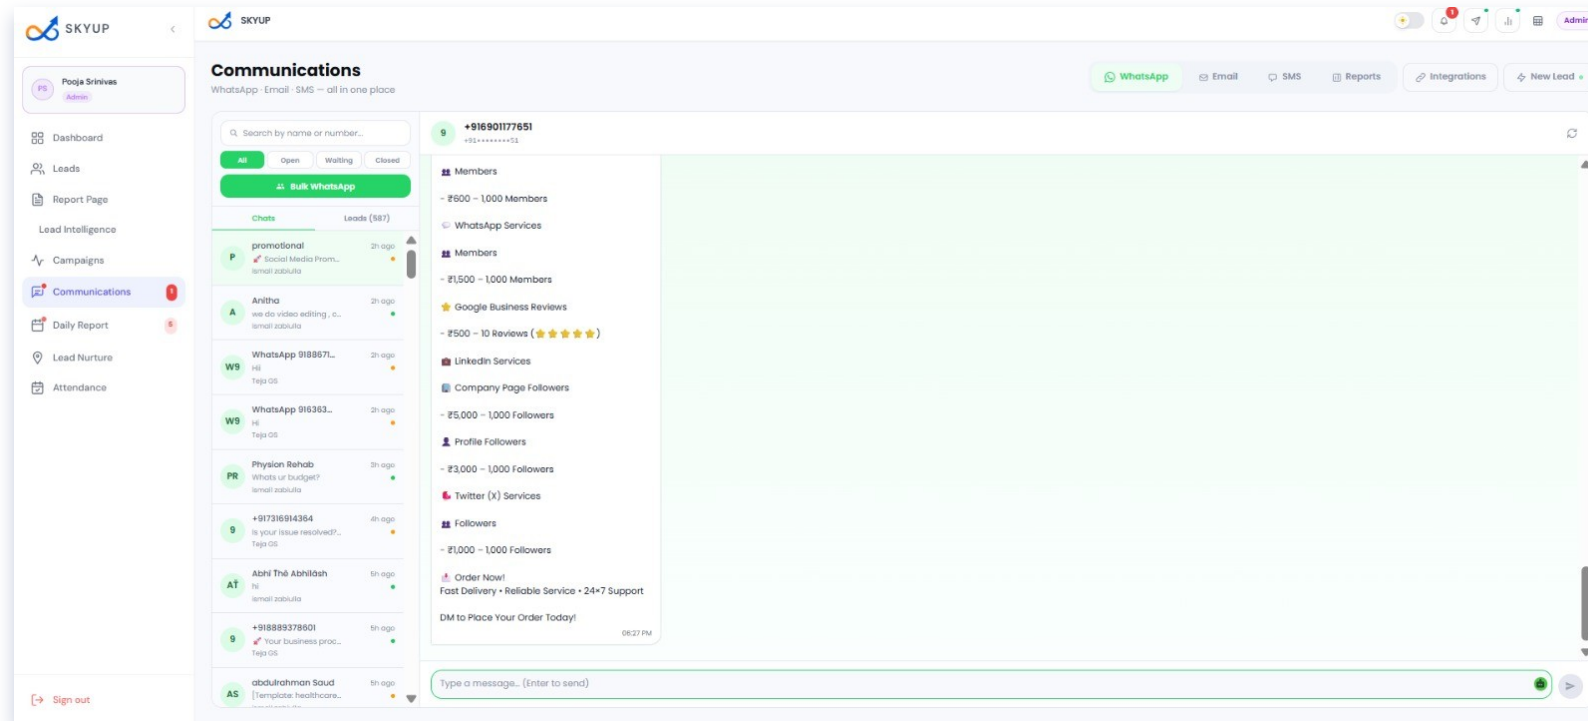

A React Native admin app monitors chats and hands off to a human.

Proven across clients

Delivered for Sarathi Associates, LauncherDesk, AbhiCabs and more.

WhatsApp — All Channels, One Inbox

All channels, one inbox

WhatsApp, Email and SMS unified in a single view.

Bulk WhatsApp

Fire nurture and promos to whole segments in one click.

Ready-made templates

Service-specific message templates on tap.

Lead-linked chats

Every conversation tied back to its lead in the CRM.

WhatsApp, email and SMS in one place — with bulk sends and ready templates.

Marksheet Scanner

Point a phone at any document — get structured Excel back

THE CLIENT'S PAIN Entering data from marksheets, answer booklets, admission forms, fee receipts and ledgers was manual, slow and error-prone — with no way to define what to extract and no offline or cloud storage.

WHAT IT DOES

CameraX capture

Live guided framing — snap any marksheet, form, receipt or ledger.

Template / schema builder

Define exact fields once, or auto-detect them from a sample sheet.

Dual AI extraction

Gemini reads layout, OpenAI extracts values; Azure OCR as a third option.

Universal zero-config scan

Any labelled document — fields and values detected with no template.

Ledger scan + handwriting

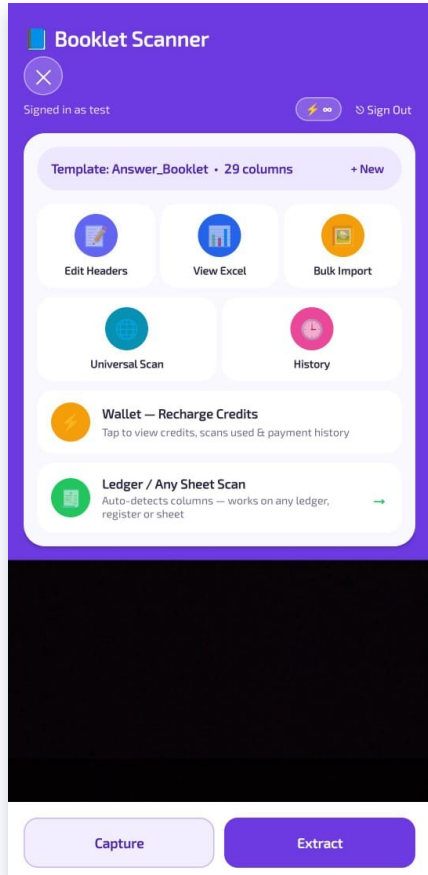

Tabular ledgers structured; AI corrects handwritten values.

Excel export + wallet

One-tap XLSX export, per-user cloud storage, credits, white-label.

Marksheet Scanner — On Any Phone

Pick a saved template or scan any document — extract straight to Excel.

Reusable templates

Save a schema once — e.g. Answer_Booklet, 29 columns.

Universal & ledger scan

Zero-config scan for any form, register or ledger.

Bulk import + Excel

Batch-scan and export straight to Excel, with history.

Wallet credits

Scan credits and usage tracked per user; white-label.

AI Lead Intelligence

The AI layer that tells reps who's hot and what to do next

THE CLIENT'S PAIN

Reps sit on hundreds of leads with no idea who's actually hot or what to do next — so good leads go cold while the team works the wrong ones.

WHAT IT DOES

AI action summaries

A plain-language summary per lead, built from call history and meeting remarks.

Next best action

The single most useful next step, surfaced automatically for each lead.

Sentiment analysis

Reads the tone of interactions to flag interest and risk.

Hot / Warm / Cold

Suggests a temperature so reps prioritise the right leads first.

AI call summaries

Every logged call summarised — no manual note-taking.

Qualification scoring

Automatic score against rules — score, max, percentage and category.

Digital Growth

Getting found, getting leads, and turning them into customers.

Rocky Marketing Automation • Performance Marketing • SEO • Google Business Profile • Social • eCommerce • Analytics

03

Rocky — Digital Marketing Automation

Automates the whole marketing motion — not just paid ads

THE CLIENT'S PAIN Digital marketing is fragmented and manual — strategy, campaign building, targeting, content and optimization spread across tools and guesswork, so businesses overspend and can't scale marketing without a big team or agency retainer.

WHAT IT DOES

Grounded in real playbooks

Dual RAG retrieval from official Meta/Google docs + marketing strategy.

Full-funnel campaign build

Drafts structure end-to-end across campaign → ad set → ad.

Precise targeting

Audience by location and interest via the Meta Targeting Search API.

Across the whole motion

Strategy, creative direction and channels — paid ads are one slice.

Self-improving

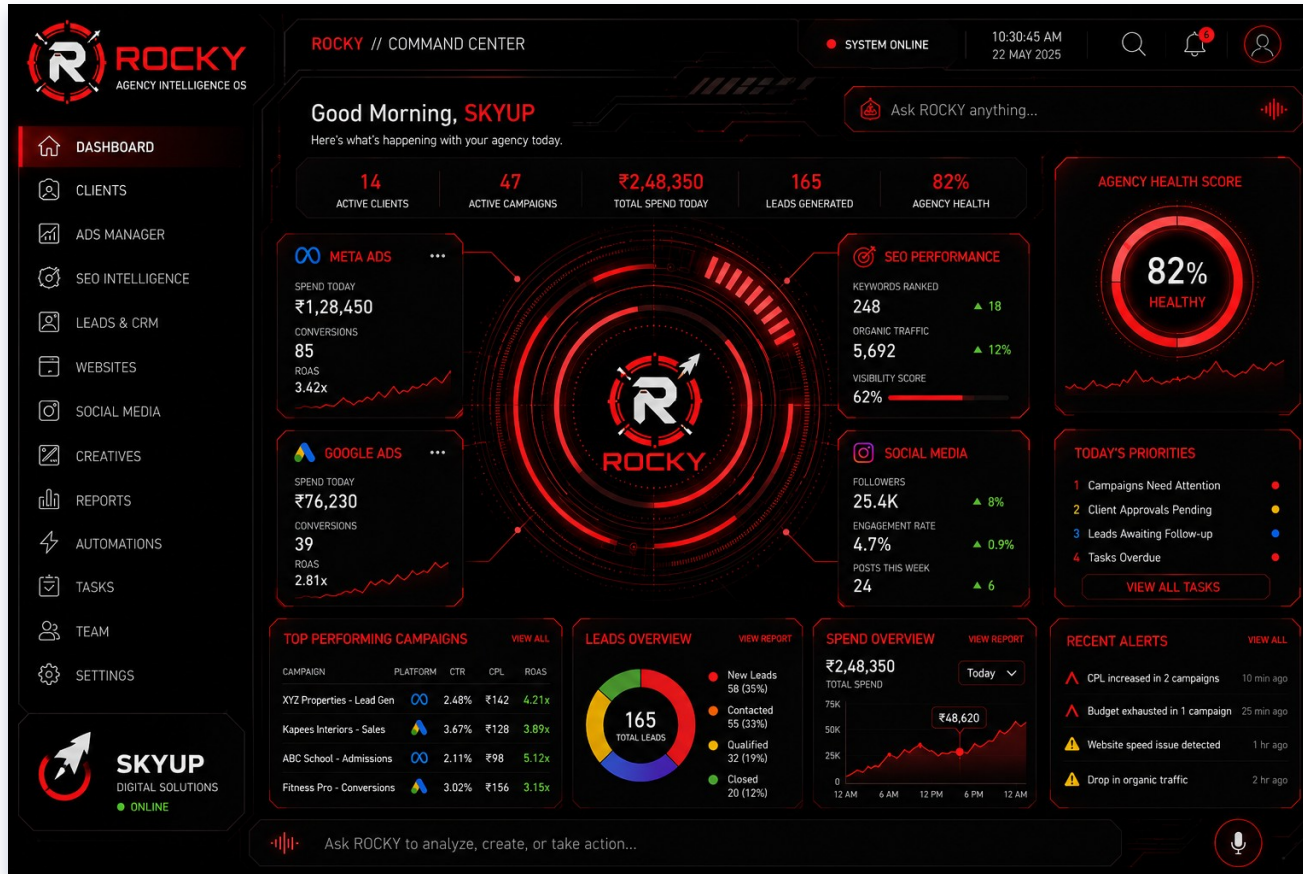

A results feedback loop shifts spend toward what actually converts.

Always current

A daily ingestion job keeps the ad-knowledge base fresh.

Rocky — The Agency Command Center

Unified command center

Meta Ads, Google Ads, SEO and social in a single live view.

Agency health score

An at-a-glance health read across every active client.

Leads & spend overview

Live leads pipeline and spend tracking, updated through the day.

“Ask Rocky anything”

A built-in AI copilot to analyze, create or take action — by voice or text.

One screen for every client, campaign and channel — with an AI you can simply ask.

Performance Marketing

Meta & Google ads tied to real, trackable leads

THE CLIENT'S PAIN Ad budgets get spent with no clear line to leads or revenue — money goes out, and no one can say what came back.

WHAT WE DELIVER

Campaign setup

Meta and Google campaigns structured around the right objective.

Audience & lookalikes

Targeted and lookalike audiences built from your best customers.

Creative & copy testing

Multiple creatives and hooks tested to find what actually performs.

Landing pages & forms

Conversion-focused landing pages and lead forms, not just clicks.

Conversion tracking

Pixels and events wired up so every lead is attributed.

Weekly reporting

Clear reporting on spend, leads and cost per lead.

SEO & Organic Growth

Rank for what your customers actually search

THE CLIENT'S PAIN

Businesses rank nowhere for the terms customers search — so competitors get found first, and paid traffic stops the moment the budget does.

WHAT WE DELIVER

Technical audit & fixes

Site health, speed and crawlability issues found and fixed.

Keyword & intent research

The terms real buyers search, mapped to pages.

On-page optimization

Titles, structure and content tuned to rank and convert.

Content & blog strategy

A content plan that builds topical authority over time.

Authority / backlinks

Quality links that lift domain strength and rankings.

Rank & traffic reporting

Transparent reporting on positions and organic traffic.

Google Business Profile

Win the 'near me' search and the map pack

THE CLIENT'S PAIN

Nearby customers search 'near me' and pick whoever shows up first with strong reviews — and for most businesses, that isn't them.

WHAT WE DELIVER

Profile & categories

Correct categories and complete, optimized profile setup.

Services & products

Full services and products listed so you appear for more searches.

Photos & posts

A steady cadence of photos and posts that keep you active.

Reviews & responses

Review generation and professional responses to every review.

Q&A & messaging

Questions answered and messaging handled so leads don't drop.

Local rank monitoring

Tracking your position in the local map results over time.

Social Media Marketing

A consistent, on-brand presence that builds trust

THE CLIENT'S PAIN An inactive or off-brand social presence quietly costs trust — prospects check your feed before they ever call, and a dead page reads as a dead business.

WHAT WE DELIVER

Content calendar & design

A planned calendar of on-brand posts, designed and scheduled.

Platform management

Instagram, Facebook and LinkedIn run consistently for you.

Reels & short-form

Short-form video that actually gets reach today.

Community management

Comments and DMs handled so engagement turns into leads.

Paid boosting

Smart boosting of the posts worth putting spend behind.

Engagement reporting

Reporting on reach, engagement and follower growth.

eCommerce Growth

Turn traffic into orders — and orders into repeat orders

THE CLIENT'S PAIN Traffic comes but doesn't convert — carts get abandoned, there are no repeat orders, and there's no retention engine bringing customers back.

WHAT WE DELIVER

Store setup & optimization

Storefront built or optimized for speed and conversion.

Product feed & catalog

Clean catalog and feeds wired into Google and Meta shopping.

Checkout & conversion tuning

Friction removed from checkout to lift completed orders.

Retargeting & flows

Abandoned-cart and email/WhatsApp flows that recover sales.

Offers & upsell

Bundles, offers and upsells that raise average order value.

Sales analytics

Clear view of what sells, what doesn't and where to push.

Conversion & Analytics

Close the loop — know exactly what drives revenue

THE CLIENT'S PAIN

Marketing runs blind — no one can say which channel actually produced revenue, so budget goes to whatever feels right instead of what works.

WHAT WE DELIVER

GA4 & tracking setup

Proper analytics and event tracking installed correctly.

Attribution & funnels

See which channels and steps actually drive conversions.

Dashboards & reporting

One live dashboard leadership can actually read.

A/B testing

Structured tests on pages and offers to lift conversion.

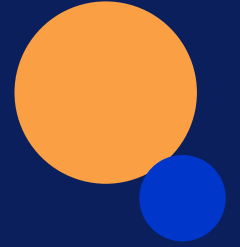

Behavior & heatmaps

Heatmaps and session insight showing where users drop off.

Monthly insight reviews

A monthly review that turns data into the next move.

Build. Automate. Grow.

Tell us the one process that eats your team's day — we'll show you the software, automation or growth engine that removes it.
