SkyUp CRM

Web + mobile — every lead, follow-up and deal in one place

THE CLIENT'S PAIN Sales teams tracked leads in spreadsheets — follow-ups slipped, no one could see where deals stood, and campaign leads from Meta, Google and LinkedIn arrived by hand with no performance data for management.

WHAT IT DOES

Lead pipeline

Source attribution, Hot/Warm/Cold scoring and full interaction history per lead.

WhatsApp nurture

1,760+ industry-specific automated sequences fired at each pipeline stage.

Multi-source ingestion

Meta, Google, LinkedIn and web-form leads flow in, auto-deduplicated.

AI lead intelligence

Next best action, key points, sentiment and suggested temperature per lead.

Call logging & transcription

Outcomes, recordings and AI call summaries captured automatically.

Live dashboard & reports

Per-employee daily reports plus a custom report builder for management.

SkyUp CRM — Live Lead Dashboard

Live lead pipeline

585 leads auto-split into Hot, Warm and pipeline stages.

Multi-source leads

Meta, website and more — leads by source at a glance.

Conversion tracking

Conversions, phone/email reveals and daily trends together.

Team performance

Per-employee performance and a live recent-activity feed.

Every lead, source and conversion in one live view — 585 leads and counting.

SkyUp CRM — Use Cases

How sales teams put the CRM to work, day to day

USE CASES

Ad-driven sales teams

Meta and Google campaign clicks feed straight into one pipeline, so no paid lead is ever handled by hand or lost between channels.

Field sales follow-up

Reps get an auto-scored Hot/Warm/Cold list each morning and know exactly who to call first, with WhatsApp covering the rest.

Sales management oversight

Managers review live per-employee dashboards for conversion and call volume, without chasing manual status updates.

Call quality & compliance

AI-transcribed calls let a team lead audit pitch quality and confirm what was promised to a customer in seconds.

School ERP

Every operational area of a school in one role-based system

THE CLIENT'S PAIN Students, teachers, timetables, exams, fees and attendance lived across disconnected registers, spreadsheets and paper — data gaps, delayed reporting, and no access control, so every staff member could see all data.

WHAT IT DOES

Students & teachers

Complete profiles, enrollment, academic history and class assignments.

Attendance

Digital class or individual attendance with instant date-range reports.

Exams & marks

Scheduling, per-subject result entry and auto-generated report cards.

Fee management

Fee structures, collection records and outstanding-balance tracking.

Timetable & homework

Class timetables, teacher coordination and digital assignments.

Role-based access + audit

Principal, admin, teacher, caretaker — each sees only their data.

School ERP — Use Cases

How schools run admissions, exams and fees on one system

USE CASES

Admissions & enrollment

An admin enrolls a student once and the record auto-populates class assignment, fee structure and attendance roster.

Exam season

Teachers enter subject-wise marks and report cards generate automatically for every student in a class.

Fee follow-up

The accounts office pulls an outstanding-balance report instantly at month-end, no more cross-checking paper receipts.

Principal oversight

Leadership reviews school-wide attendance and collections in one view, while each role sees only its own data.

Project Management Application

Web management + desktop tracker in one ecosystem

THE CLIENT'S PAIN Teams ran on spreadsheets and scattered chat — no single source of truth, constant manual follow-ups for status, poor workload visibility, and attendance disconnected from actual project work.

Role-based dashboards

Task assignment & tracking

Daily reports & attendance

Tracker & productivity

Admin dashboard

Desktop-tracker productivity view

Real product UI. Tracker data is positioned as productivity support — with clear policies and access controls, not surveillance.

Project Management Application — Use Cases

How teams stay on schedule without the status-chasing

USE CASES

Multi-client agency delivery

An agency running several client projects assigns tasks per project and sees completion rates without chasing status over chat.

Remote & distributed teams

Managers verify attendance and productivity using the desktop tracker, tied to actual logged project work.

Workload balancing

A team lead spots who's overloaded and who has capacity, then reassigns work before deadlines slip.

Leadership reporting

Executives open a role-based dashboard for a real-time read on projects, completion rate and team output.

AbhiCabs Transport ERP

The full booking lifecycle — create to dispatch to close

THE CLIENT'S PAIN Bookings were juggled across calls and messages — no single place to see what was booked, confirmed or dispatched. Vehicles got double-assigned, drivers and operators had no shared view, and every status update went out by phone.

WHAT IT DOES

Booking management

Create, confirm, dispatch and close bookings from one dashboard with full status visibility.

Smart vehicle allocation

Checks availability and capacity before assigning — double-bookings blocked automatically.

Live status updates

Booking and vehicle changes appear in real time for coordinators, operators and drivers.

Background job processing

Notifications, transitions and reports run via BullMQ — the platform never slows down.

Scalable architecture

Load distributed across servers with caching for fast performance as volume grows.

Role-based access + history

Tailored views per role, plus full booking history and logs for disputes or export.

AbhiCabs — Website + ERP

One system end-to-end — customers book on the site, operators run it on the ERP.

Customer booking website

Fleet & booking ERP (admin)

AbhiCabs Transport ERP — Use Cases

How bookings move from click to dispatch to close

USE CASES

Customer self-service booking

A customer books a one-way, round-trip, local or airport ride online, and the request flows straight to the operator's dashboard.

Dispatch coordination

A dispatcher assigns the nearest available vehicle in one click, with double-bookings blocked automatically.

Live fleet visibility

Operations staff watch fleet status update live through the week, spotting utilisation gaps at a glance.

Dispute resolution

Support pulls the full timestamped booking history to resolve a fare or pickup dispute without relying on memory.

CRM × Invoice System

One connected flow from lead to order to payment

THE CLIENT'S PAIN Enquiries, sales orders, invoices, payments and delivery were spread across spreadsheets, WhatsApp and paper. Nothing linked a lead through to invoice and delivery, reporting was manual, and cheque follow-ups slipped.

WHAT IT DOES

Lead-to-buyer pipeline

Track every enquiry through Lead → Opportunity → Enquiry → Buyer with source and city.

Orders + auto lookup

Create orders with line items and terms; the mobile number auto-fills the customer's details.

Tax invoice generation

Convert any order to a numbered invoice with 5% VAT — PDF generated and stored automatically.

6-stage delivery tracker

Pending → Confirmed → Packed → Delay → Out → Delivered, each stage timestamped.

Cheque calendar + payments

Receivable/payable cheques on a colour-coded calendar; Unpaid/Partial/Paid at a glance.

WhatsApp share & chat

One-tap share of orders and invoices, plus a full WhatsApp conversation interface.

CRM × Invoice — Live Dashboard

Lead-to-buyer pipeline

Contacts flow Lead → Opportunity → Enquiry → Buyer.

Delivery tracker

Pending → Confirmed → Packed → Out for Delivery, live.

Orders & invoices

Orders, tax invoices and a cheque calendar in one menu.

Pipeline by stage

See exactly where every deal sits, by count and value.

Lead to order to invoice to delivery — the whole flow on one board.

CRM × Invoice System — Use Cases

How UAE/GCC trading teams run lead-to-payment on one flow

USE CASES

Trading & distribution businesses

An enquiry converts into a tracked order, then a VAT-compliant invoice, without re-entering customer details across systems.

Cheque-heavy payment cycles

Finance checks the colour-coded cheque calendar each morning and follows up before a post-dated cheque is due.

Delivery accountability

Warehouse teams update delivery status in real time, so sales can tell a customer exactly where an order is.

Customer communication

A salesperson shares an invoice over WhatsApp from inside the CRM, keeping the conversation linked to the customer record.

FMS Production Tracking

Role-based QC and production, milestone by milestone

THE CLIENT'S PAIN Production and QC ran on spreadsheets — plan dates, milestone status, inspection sign-offs and buyer updates all scattered, with nothing stopping a step being marked done before it was actually approved.

WHAT IT DOES

12-milestone model

Two tracks — Production (direct-complete) and QC (approval-gated) — across 12 stages.

Auto plan dates

Plan dates calculate automatically from PO and ship-date offsets.

Offline inspector PWA

Inspectors record QC and upload evidence to S3 even with no signal (IndexedDB outbox).

Merchandiser interlock

Only merchandiser approval writes the Actual date — enforced as a real DB transaction.

5-state colour tracking

Every cell moves through five colour states, so status reads at a glance for all roles.

Buyer link + alerts

A public buyer status link shows live progress; a built-in alert engine notifies stakeholders.

FMS — Live Production Tracking

Open PO lines at a glance

171 open lines, with overdue, due-today and on-track counters up top.

Follow-up by due date

Every line sorted by its next due date so nothing quietly slips.

Next task + days to ship

Each PO shows its next milestone and exactly how many days remain.

Live status flags

Lines flag Overdue in red the moment they cross the due date.

Plan-vs-actual milestone tracking for Natraj Home Furnishing — every open PO line in one screen.

FMS Production Tracking — Use Cases

How factories keep every PO line and QC sign-off on track

USE CASES

Garment & home-furnishing factories

A production manager tracks 170+ open PO lines in one screen and sees which are overdue, due today, or on track.

QC sign-off control

Only merchandiser approval can write the actual completion date, so a milestone can't be falsely marked done.

On-floor inspection

Inspectors on a factory floor with unreliable Wi-Fi record results and photos offline; they sync once connected.

Buyer transparency

An overseas buyer checks a shared status link for live production progress without emailing the factory.

Sadagiri Home Healthcare

A branded platform for carers, patients and families

THE CLIENT'S PAIN The organisation had no digital platform to present its services or coordinate care. Carers couldn't check in, log tasks or record notes; families couldn't see care plans or message staff; and the old interface carried another provider's branding.

WHAT IT DOES

Service showcase

A branded, patient-facing view presenting every home-healthcare service clearly.

Carer task checklist

A structured task list per visit — tick off in real time, next task always highlighted.

GPS check-in / out

Carers confirm arrival and departure by location — a digital record per visit.

Voice note recording

Record clinical observations and handover notes during each visit.

SOS emergency button

A hold-to-trigger SOS alert available throughout the carer interface.

Multilingual + WhatsApp

Regional language selector, in-app WhatsApp messaging and a live status feed.

Sadagiri — Family & Carer Platform

Admin console

Active patients, verified carers, visits today and open alerts at a glance.

GPS-verified check-in

The family gets an instant notification the moment a carer arrives.

Live task completion

Personal care, medication and meals tick off in real time.

SOS + voice updates

Hold-to-trigger SOS and carer voice notes surface instantly to admin and family.

One live feed connecting the carer in the field, the admin console and the family — as it happens.

Sadagiri Home Healthcare — Use Cases

How carers, families and coordinators stay connected

USE CASES

Family reassurance

A family member gets an instant notification the moment a carer GPS-checks in at a parent's home.

Visit accountability

Coordinators see in real time which tasks — medication, meals, personal care — are complete across all patients.

Clinical handover

A carer records a voice note on a patient's condition, giving the next carer an accurate handover without relying on memory.

Emergency response

A single hold on the SOS button alerts admin and on-call staff immediately, with the patient's location attached.

Build. Automate. Grow.

Tell us the one process that eats your team's day — we'll show you the software, automation or growth engine that removes it.
